answer to each of the questions		the result of the saling		
		at universal over the p	ast twenty years. More than thr	ee
quarters of people in the world	l now own a mobile	device, and more th	nan half communicate via soc	ial
networking.				
It is now hard to imagine a			of such things as mobile phone	
LAURING STREET ISTRIBUTE TO ANY OF ANY A	IC TO CTON IN TOUCH WITH	n a large network of	triends no matter where they at	100

It is now hard to imagine a world without mobile devices consisting of such things as mobile phones, laptops and tablets. They allow us to stay in touch with a large network of friends, no matter where they are. But many experts say that communicating with a device is nothing like talking with someone in person. "Body language, eye contact and tone of voice can tell us so much," psychologist Mary Peters says. "And none of those exist on a device. Even video chat removes many subtle clues."

We don't know to what extent these technologies will permanently change the way people interact. People will always want to <u>meet up</u> with others in small and large groups. Indeed, it is fair to say that social media makes it easier than ever before for people to organise social events. However, there is still a danger that device-centred communication may have a negative long-term impact on the way people interact with each other on a day-to-day basis.

We must not, therefore, lose sight of the need to focus on the actual people around us, and remember that they deserve our real – not virtual – attention. The idea of a culture where people always have a screen between them sounds a bit funny, because deep understanding comes when we see the reactions on other people's faces.
