### Looking for a new Earth

For thousands of years, humans have explored the Earth. Now astronomers are exploring space, looking for new planets or a “new Earth” for humans to live on in the future. But what will a new Earth look like? And how do we find a “new Earth”?

First of all, astronomers look for a star. That’s because our own Earth orbits a star (the Sun). When astronomers have found a star, they look for planets around it. In recent years, astronomers have found thousands of new planets orbiting suns. Once they find a new planet, it’s important to measure the distance between the planet and the sun. In fact, most planets (unlike our Earth) are either too near to the star or too far away.

When they find a planet in a good position, astronomers look for three things: water, air and rock. Water is important because if humans go there, they will need water to drink and to grow plants. If plants can be grown, they can produce air for humans to breathe. Then, astronomers also look for rocks, as water is often under the rocks.

In recent years, astronomers have found a few planets that are very similar to Earth. For example, Gliese 581g is a planet at a safe distance from the nearest star. Astronomers think it has water and rocks. The average temperature is between -310C and -120C which is cold, but not colder than Antarctica or the Arctic Circle. Humans can live in those temperatures.

However, there are differences between our Earth and this planet. Gliese 581g is bigger than the Earth and a year on Gliese 581g is only 37 Earth days instead of 365. And the biggest problem is the distance. Gliese 581g is 18 trillion kilometers from the Earth. **With current space technology, it will take humans 766,000 years to travel there.**

33. In paragraph 2, what do the astronomers look for first when they are finding a new Earth? **Star**
34. In paragraph 3, when astronomers find a good planet, what are three things that they look for? **Water, air, and rock.**
35. Why is water important for humans to live on a new planet? **Humans need water to drink and grow plants.**
36. Is the planet Gliese 581g bigger or smaller than our Earth? **Bigger.**
37. What does the writer mean when mentioning the last sentence “**With current space technology, it will take humans 766,000 years to travel there.**”?

**It would take humans a very long time to reach Gliese 581g with the technology we currently have.**
